

ABSTRACT

A removable storage device for use with a crutch; the device includes a flexible body in the form of an inverted pouch having an opening at the bottom of the pouch that is adapted to receive the uppermost portion of a crutch. The pouch also includes external storage pockets on the front and back portions of the pouch and a handle attached to the top portion of the pouch for carrying the storage device when it is not positioned on a crutch. The storage device also includes means for closing the opening at the bottom of the pouch.
